

SPEAKER: Dr. Ramamurthy Badrinath, Ericsson Research, Bangalore

TITLE: IoT: From Data to Action

Abstract:

IoT is emerging both as an important source of data as well as an important means to actuate. Thus IoT provides us the right setting to leverage the techniques of learning with big data as also new opportunities to automate processes. In this talk, we explore how various technologies interplay in this scenario. This includes techniques such as analytics, machine learning, semantic models and action models. The talk will also include a discussion of a number of W3C and other standards that are emerging to solve different challenges in the area.
